

From 4Source space station there is a great view of the entire semiconductor universe. From here we explore the best sources - both terrestrial and supernatural for rather scarce electronic components - and it's fully equipped for space emergencies ...!

# THE REEL LIFE

Alert!  
Urgent call for special purchase agents!

Captain,  
4S-ONE Shuttle is ready for take-off!

Quick, get ready for a rescue mission!

Our obsolete part detectors have located a rare occurrence of components on the planet Pol-X ... probably the last of their kind! Take-off in 60 seconds, 59, 58, 57...

You can quickly reach planet Pol-X with Warp-4. The planet is amazing ...

It's like an intergalactic snowball ...

Oh no! Everything is covered in ice: Hold on!

... phew! No component will survive!

Anyway, it's our job.

Ready for landing!

# GROOAAAAR!

# SPLATSCH!

# SPLOOSCH!

Just as I suspected: Empty trays, tubes and reels all around! It would take a miracle to find something alive on this planet of pure ice ...

# GROAR!

"Something" alive, okay-okay ... scratch that!

Do you see what I see!?

Intruders? Stop there!

Wow! An intact reel of the components we are searching for ... in pristine condition!

Who are you? And what do you want?

Friends, you are the first visitors we have seen here since we moved here from the North Pole ... take this as a gift from us!

You can tell the boss in person!

With the ice monster looking on, the visitors are brought to the boss' office ... lucky for them today is a special day!

Finally, our friends completed their mission successfully ... what a happy ending!\*

Thank you so much, Santa!

\*Only for the ice creature it will be probably too warm on earth!
